## 1. Duomenų klasė

#### 1.1. Darbo užduotis

- U1-13. Krepšinio rinktinė. Artėja Pasaulio vyrų krepšinio čempionatas. Turime į rinktinės stovykla pakviestų kandidatų sąrašą. Duomenų faile pateikiama informacija apie pakviestus krepšininkus: vardas, pavardė, gimimo data, ūgis, pozicija, klubas, požymis "pakviestas", požymis "kapitonas" (true, false).
- Raskite jauniausią i rinktinę pakviestą krepšininką, ekrane atspausdinkite jo vardą, pavardę, amžių ir poziciją. Jei yra keli, spausdinkite visus.
- Raskite krepšininkus, žaidusius Kauno "Žalgiryje", ekrane atspausdinkite jų vardus, pavardes bei pozicijas.
- Krepšininkai mėgsta švęsti gimtadienius. Sudarykite sąrašą krepšininkų, kurie švęs gimtadienius pasirengimo krepšinio čempionatui metu (liepos 20d. – rugsėjo 3d.), į failą "Gimtadieniai.csv" įrašykite krepšininkų vardus, pavardes bei gimimo mėnesį ir dieną.

## 1.4. Dėstytojo pastabos

L1 ataskaitos pastabos. Ataskaitos puslapis yra Letter, o ne A4 dydžio. Viršelis neatitinka metodiniuose nurodymuose pateikiamo viršelio šablono. 1.1 skyrelyje nenurodytas užduoties numeris. Kai programą sudaro keletas klasių **.cs** failų, programos teksto skyrelyje (1.2) klasės išdėstomos nuo žemiausiojo lygmens, o lygmens viduje - abėcėlės tvarka, išskyrus failą, kuriame yra Main(). Šis failas turi būti paskutinis. Jūsų atveju - Player, InOutUtils, TaskUtils, Program. Programos testavimas 1.3 skyrelyje tik su vienu duomenų rinkiniu (už šį trūkumą vertinimas gali būti mažinamas iki pusės taško!). L1 ataskaita vertinama 0,5 tšk.

Programos trūkumai:

- 1. Programoje trūksta komentarų;
- 2. Programa spausdina ne visus rezultatus, kurių reikia jos aiškumui;
- 3. Du for ciklai metodo viduje.

Pratyby vertinimas: 0,8.

Testo balas: 1,75.

Galutinis įvertinimas: 7.

## 2. Skaičiavimų klasė

#### 2.1. Darbo užduotis

- U2-13. Krepšinio rinktinė. Turite ne tik šių, bet ir vienų ankstesniųjų metų į stovyklas pakviestų krepšininkų sąrašus. Keičiasi duomenų failų formatas. Pirmoje eilutėje metai, antroje stovyklos pradžios data, trečioje stovyklos pabaigos data. Toliau informacija apie krepšininkus pateikta tokiu pačiu formatu kaip L1 užduotyje.
- Raskite krepšininkus, žaidusius Kauno "Žalgiryje", ekrane atspausdinkite jų vardus, pavardes bei pozicijas.
- Raskite aukščiausią krepšininką, ir ekrane atspausdinkite jo vardą, pavardę bei amžių. Jei yra keli, spausdinkite visus.
- Sudarykite sąrašą krepšininkų, kurių ūgis 2 metrai ir daugiau, į failą "Aukštaūgiai.csv" įrašykite krepšininkų vardus, pavardes ir ūgį. Jei krepšininkas buvo pakviestas į rinktinę du metus, įtraukite jį į sąrašą tik vieną kartą.

#### 2.2. Programos tekstas

## 2.4. Dėstytojo pastabos

L2 ataskaitos pastabos. 2.3 skyrelis netvarkingas: netaisyklingi sakiniai; tekste nėra nuorodų į paveikslėlius; nepaaiškinta, kokius programos kelius tikrina testavimo atvejai; nepaaiškinama, kokia informacija yra pateikiama. L2 ataskaita vertinama 0,8 tšk.

Programos trūkumai:

- 1. Netaisyklingi komentarai;
- 2. Netaisyklingi metodų pavadinimai;
- 3. Reikia hardcodint kintamuosius.

Pratybų vertinimas: 1.

Testo balas: 1.

Galutinis įvertinimas: 7.

## 3. Konteineris

### 3.1. Darbo užduotis

- U3\_13. Krepšinio rinktinė. Turite ne tik šių, bet ir vienų ankstesniųjų metų į stovyklas pakviestų krepšininkų sąrašus. Keičiasi duomenų failų formatas. Pirmoje eilutėje metai, antroje stovyklos pradžios data, trečioje stovyklos pabaigos data. Toliau informacija apie krepšininkus pateikta tokiu pačiu formatu kaip L1 užduotyje.
- Raskite jauniausią į rinktinę pakviestą krepšininką, ekrane atspausdinkite jo vardą, pavardę, amžių ir poziciją. Jei yra keli, spausdinkite visus.
- Raskite krepšininkus, žaidusius Kauno "Žalgiryje", ekrane atspausdinkite jų vardus, pavardes bei pozicijas.
- Sudarykite į rinktinę pakviestų krepšininkų, kurie dalyvavo dvejose stovyklose, sąrašą. Jų duomenis įrašykite į failą "Senbuviai.csv". Surikiuokite krepšininkus pagal ūgį, pavardes ir vardus.
- Sudarykite sąrašą krepšininkų, kurių ūgis 2 metrai ir daugiau, į failą "Aukštaūgiai.csv" įrašykite krepšininkų vardus, pavardes ir ūgį. Jei krepšininkas buvo pakviestas į rinktinę du metus, įtraukite jį į sąrašą tik vieną kartą.

## 3.4. Dėstytojo pastabos

L3 ataskaitos pastabos. 3.2 skyrelyje kodą reikėtų pateikti arba visą su nuspalvinta sintakse arba visą su nenuspalvinta sintakse ir būtinai vienodu šriftu. 3.3 skyrelyje nėra nuorodų į pateiktus paveikslėlius. Testavimo pavyzdžiai neatskirti vienas nuo kito. 3.3 skyrelyje aiškinamieji sakiniai turi būti Times New Roman šriftu, o failų turiniai - Courier New šriftu. Aiškinamieji sakiniai netikslūs. L3 ataskaita vertinama 0,8 tšk.Programos trūkumai:

- 1. Neteisingai užklotas Equals metodas;
- 2. Neuniverslaus sprendimo metodai;

Pratyby vertinimas: 0.5.

Testo balas: 2.

Galutinis įvertinimas: 8.

# 4. Teksto analizė ir redagavimas

### 4.1. Darbo užduotis

- U4L-13. Nesikartojantys žodžiai Dviejuose tekstiniuose failuose Knyga1.txt ir Knyga2.txt duotas tekstas sudarytas iš žodžių, atskirtų skyrikliais. Skyriklių aibė žinoma ir abejuose failuose yra ta pati. Raskite ir spausdinkite faile Rodikliai.txt:
- žodžių, kurie faile Knyga1.txt kartojasi tik po vieną kartą ir jų nėra faile Knyga2.txt, skaičių ir tokių žodžių sąrašą (ne daugiau nei 10 žodžių);
- žodžių, kurie yra abejuose failuose, skaičių ir tokių žodžių sąrašą (ne daugiau nei 10 žodžių), surikiuotą pagal pasikartojimo skaičių mažėjimo tvarka, o kai pasikartojimų skaičius sutampa pagal abėcėlę;
